

Create safety in your workplace with a free risk assessment

BROEN-LAB is a leading manufacturer of emergency shower systems. With our risk assessment, we help companies and organizations protect their employees in case of an accident. Our experts analyze your facilities and work flows to determine the various risk factors.

Accidents do happen!

The Danish Working Environment Authority estimates that a workplace accident involving chemical burns occurs every third working day.

Be prepared for the risk

According to the Danish Working Environment Authority, the necessary safety equipment must be present where there is a risk of injury.

Limit the damage

A properly installed emergency shower or eyewash station can mitigate injuries to the eyes and body in case of an accident.

What hazards are present in your workplace?

At BROEN-LAB, we have decades of experience in finding solutions that address both safety levels and cost-effectiveness.

This is the path to optimal employee safety:

1. Risk Assessment

We will call you and ask a series of clarifying questions. Together, we will agree on a time for us to visit you.

During the visit, we will review your workplace and prepare a free risk assessment in accordance with DS/EN 15154-1, 2, and 5.

2. Recommendations

After the visit, you will receive a report that describes the current risks and assesses your company's preparedness to address them.

The report will include our recommendations for a new setup or how your existing emergency shower system can be upgraded to meet current safety standards.

3. Remediation

If there is a need to enhance safety in your company, BROEN-LAB can provide emergency showers tailored to your needs and preferences.

Our 'Plug-and-Play' products are easy to install, but if you prefer, we also offer installation services.
